

## E2 tag Mouse Monoclonal

### Antibody

**Cat. Number:** UM3013  
**For Research Only**

#### Description:

|                      |   |
|----------------------|---|
| <b>Synonyms:</b>     | E2 tag  |
| <b>Immunogen:</b>    | A synthetic peptide GVSSTSSDFRDR coupled to KLH |
| <b>Specificity:</b>  | All specials                                    |
| <b>Host Species:</b> | mouse   |
| <b>Ig Isotype:</b>   | Mouse IgG1                                      |
| <b>Purification:</b> | Protein A or G purified                         |
| <b>Applications:</b> | WB (1: 1000-1: 10000)                           |
| <b>Band size:</b>    | NA  |

#### Formulation and Storage:

|                     |                |
|---------------------|----------------|
| <b>Formulation:</b> | Liquid         |
| <b>Storage:</b>     | -20°C or lower |

#### Background:

The E2-Tag is a peptide which is derived from the Bovine Papillomavirus type-1 transactivator protein E2 and consists of 10 amino acids (STSSDFRDR). The detection of E2-tagged proteins is based on the binding of mouse monoclonal antibodies specific to the tagged recombinant protein.
